Worked on space flight, sub-orbital, ground based, remote sensing, Insitu, and laboratory instrumentation as well as operated inter-planetary, orbital, and suborbital ground support systems.

Built two different balloon instruments and deployed them seventeen times measuring OH and for validation for the Aura EOS MLS mission. Was a team member for Aura MLS design test and integration. Was a team member developing and deploying the CLARS FTS instrument To Mt. Wilson. Through this process, skills were acquired to design, build and utilize high resolution Fabry-Perot, Michelson and Fizeau interferometers, gas lasers, gas and diode laser systems, heterodyne receivers, custom mechanical, optical, and electronic subsystems as well as performing high level optical, mechanical, RF and electronic integration. Can work independently to design tests, solve problems, and implement solutions. Am also capable in working in a highly interactive team environment.
